Q.6.Write a program that accepts two strings and returns the indices of all the occurrences of thesecond sting in the fiest string as a list.If the second string is not present in the first string,then it should return -1

Program:-

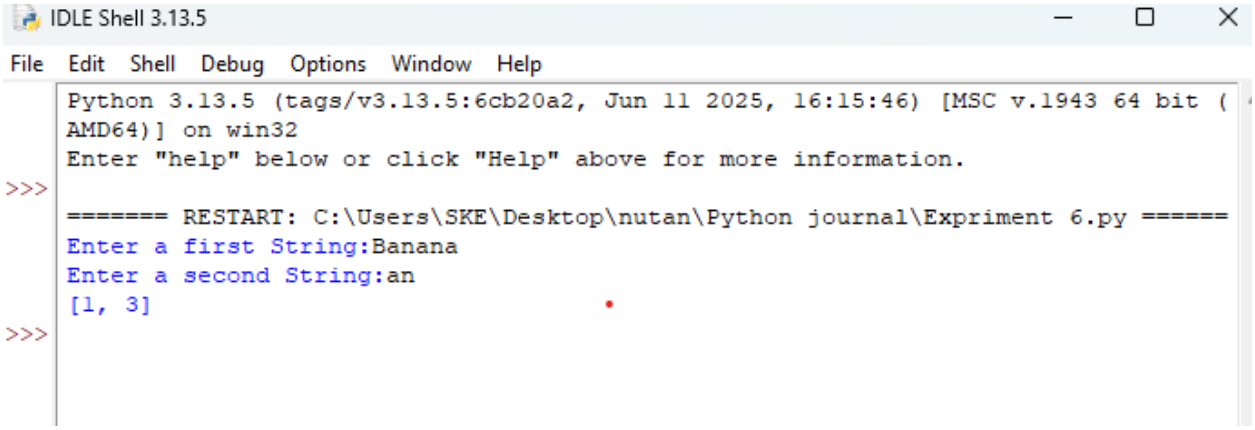

```
        string1=input("Enter a first String:")
string2=input("Enter a second String:")
indices=[]
i=0

while i<=len(string1)-len(string2):
   if string1[i:i+len(string2)]==string2:
      indices.append(i)

      i+=1
   else:
      i+=1

if indices:
   print(indices)
else:
   print(-1)
```

Output:-

IDLE Shell 3.13.5
File Edit Shell Debug Options Window Help
Python 3.13.5 (tags/v3.13.5:6cb20a2, Jun 11 2025, 16:15:46) [MSC v.1943 64 bit (
AMD64)] on win32
